

FL Studio Bus Configuration issue

I have made a plugin host. Its bus configuration is fairly typical

```
BusesProperties()
#if !JucePlugin_IsMidiEffect
#if !JucePlugin_IsSynth
    .withInput("Input", AudioChannelSet::stereo(), true)
#endif
    .withOutput("Output", AudioChannelSet::stereo(), true)
#endif
```

In my process block im doing some basic logic involving either summing if the hosted plugin is mono or vice versa. but, my issue is that even if i load a blank host into FL Studio it sums the stereo to Mono. whereas on every other daw ive tried it Stereo. So it appears to only not work in FL Studio. Anyone got any ideas ?
